Advantages of using the CF-5A's

Since your clinic already has PhreesiaPads installed the convenience of their use is likely understood. A new advantage to these pads however, is their CF-5A's Intervention application for effective time-saving smoking cessation counseling between patient and provider.

- UCSF created a program application in English and Spanish for the PhreesiaPad using the gold standard in smoking cessation to start the provider conversation before a patient's appointment.

- Assessment on PhreesiaPad eliminates pen and paper use saving screening time, data entry error, enabling an efficient and focused (brief) intervention encounter between patient and provider.

- Protocol incorporates elements of motivational interviewing and behavioral psychology while cultivating a collaborative partnership between patient and provider.

- Integrates easily with clinic and patient flow - links with EMRs, provides billing [5] documentation, creates PDFs and prints a patient's personalized response sheet, and a provider's summary and tip sheet.
The CF-5A’s uses branching logic to tailor the program to the patient’s personal needs.
